

Gas Spring/Gas Spring Holder

From Engineering Dictionary

Related Keyword: [gas](#), [spring](#), [holder](#)

English: Gas Spring/Gas Spring Holder

The gas spring is spring that pushes ejector plate to compulsory and returns it, and strength in spring can be coordinated by coordinating the filling pressure power.

When the gas spring is used, it is necessary to avoid the high temperature. (The gas vent might expand because of heat, and regular functions in the gas vent spring not fill it.)
